

Crossover Bridge Project

If your Pack is interested in building a new Crossover Bridge, the following is an example of a great project complete with photos, plans and a ceremony script. Thank You to the Pack 1540 leaders who invested a significant amount of time in developing this project. You are welcome to download and use the plans to work on your own or Michael's Woodshop may be reserved for working on some or all components of this project. The lettering on the bridge was created with a router and the Cub Scout and Boy Scout images were created using the shop's CNC machine. Please be aware that this is a substantial project and depending on the number and skill level of the adults participating, it may take more than one working session to complete. To schedule shop time, please refer to instructions for [Reserving Michael's Woodshop](#) on our webpage. If you have any questions about the project or reserving the shop, please email the volunteer team at MichaelsWoodshop.CWBS@gmail.com
